RUPASINGHE PAWNING CENTERS (PVT) LTD

FORENSIC SYSTEM DATA AUDIT & DUPLICATE INVESTIGATION

Root Cause Analysis of Duplicate Pawns, Corrupted Clients, and Cross-Branch Collisions

Date of Audit: October 27, 2026	**Target Scope:** 1,000 Clients • 229 Pawns • 300+ Logs	**Classification: STRICTLY CONFIDENTIAL**
Database: Production Supabase Cluster	**Network:** 15 Canonical Branch Nodes	**Audit Status: INVESTIGATION COMPLETE**

1. Executive Summary & Root Cause Verdict

VERDICT: There is **NO external cyber breach, unauthorized data injection, or rogue bot**. All duplicate, corrupted, or erroneous records stem from **three distinct operational & technical sources**:

1. Human Data Entry Shortcuts & Typos: Tellers mistyping client NICs, re-registering clients instead of editing them, using placeholder phones (0000000000 / 0), and manually typing -DUP1 to bypass duplicate bill checks.

2. Physical Paper Book Overlap: Kadawatha (KDW) & Kiribathgoda (KIR) branches were issued physical receipt books with overlapping serials (1R 20922, 1R 20924, 1R 20927) without forced branch prefixes.

3. NIC Regex Glitch: Software regex strictly required trailing 'V'/'X'. When tellers typed 9 digits alone or added a space (e.g. 697544625 v), the system treated it as a book ID and attached branch prefixes (PND-, BRL-), breaking citizen deduplication.

2. Forensic Findings & Accountability Matrix

Every anomaly has been matched to its creator, branch, and exact system timestamp:

Anomaly Type	Responsible Actor	Branch	Affected Records / Values	Timestamp & Exact Diagnostic Cause
Duplicate Client Registration	**Manisha Dias** manishadias@gmail.com	**PND Panadura**	• PND-676132623 (Nalanin Nandani) • PND-696132623 (Nalani Nandani) Phone: 0779076854	**2026-10-27 05:32 & 05:40** Teller made a typo (67 vs 69) and created a 2nd customer rather than updating the first record.
Dummy Phone Number	**Manisha Dias** manishadias@gmail.com	**PND Panadura**	Client: S.D. Iranthi NIC: 708330426V Phone: **0000000000**	**2026-10-27 04:03** Teller used dummy 10-zero string to bypass phone number requirement.
Manual Duplicate Pawn	**Chathurika Madushani** madushaniperera9617@...	**HMG Homagama**	Bill 1: A 6976 (Rs. 7,000) Bill 2: A 6976-DUP1 (Rs. 7,000) Pendant (520mg), 22K	**2026-10-23 04:19 & 04:20** Submitted identical pawn 89s later. When system blocked duplicate bill, teller typed -DUP1.
290+ Corrupted Phone Records	**Chathurika Madushani** madushaniperera9617@...	**HMG / W3**	290+ Clients with: • Phone: **'null'** (literal string) • Phone: **'0'** (e.g. M.a kamalawathi)	**2026-10-24 to 2026-10-27** Bulk data migration or rapid client entry without valid phone validation.
Cross-Branch Bill Collision	**K.U. Geethangani** (KIR) & **L.A. Sachini** (KDW)	**KIR & KDW**	Identical Bills in Both: • 1R 20922 (Rs. 454k vs 56k) • 1R 20924 (Rs. 102k vs 329k) • 1R 20927 (Rs. 160k vs 15k)	**2026-10-23 to 2026-10-26** Both branches issued physical receipt books with overlapping serial numbers. System lacked forced branch prefixes.
Duplicate Citizen via Space Typo	**Dahami Divyanjali** dahami.divyanjali@...	**BRL Borella**	• Old: 697544625V (D.P.M Sagarika) • New: BRL-697544625 v	**2026-10-27 07:31** Space before 'v' caused NIC regex to fail, creating a second record for an existing customer.

3. Technical & Operational Deep-Dive

3.1 Human Shortcuts, Typos & Intentional Overrides

• **Panadura Branch (Manisha Dias):** At 05:32 AM on Oct 27, teller typed 676132623 (mistyping 9 as 7). Eight minutes later, realizing the error, she re-entered the customer as 696132623 under the same mobile number (0779076854). Lacking an edit/merge client tool, both records remained active. She also entered 0000000000 for client 708330426V.
• **Homagama Branch (Chathurika Madushani):** On Oct 23, the teller originated pawn A 6976. When re-submitting 89 seconds later, the system blocked the duplicate. She manually typed -DUP1 to bypass the alert, causing duplicate capital disbursement (Rs. 7,000 x 2) on the same gold pendant. She also submitted 290+ clients with phone: 'null' and phone: '0'.

3.2 Pre-Printed Physical Receipt Book Collisions

Kadawatha (KDW) and Kiribathgoda (KIR) branches were issued physical receipt books with overlapping serial numbers. Both branches originated bills 1R 20922, 1R 20924, and 1R 20927. Because the backend permitted bare numbers without enforcing branch prefixes, both co-existed and appeared as duplicate transactions in HQ search.

3.3 Software NIC Regex Logic Flaw

The utility isNationalId() strictly matched /^[0-9]{9}[vVxX]$/ or /^[0-9]{12}$/. When tellers typed 9 digits alone or added a space (e.g. 697544625 v), the system classified it as a book ID and attached branch prefixes (PND-, BRL-), breaking duplicate detection.

4. Technical Safeguards & Corrective Action Plan

The following safeguards will permanently prevent any recurrence:

Priority	Safeguard / Action Item	Implementation Target	Expected Impact
CRITICAL (P0)	**Intelligent NIC Sanitization:** Automatically trim spaces, normalize lowercase 'v'/'x', and auto-append 'V' if 9 digits are entered.	`/src/lib/branch-mapping.ts` `/api/clients/route.ts`	Stops accidental branch prefixing and guarantees 100% deduplication of citizens across all branches.
HIGH (P1)	**Strict Phone Validation:** Reject '0', '0000000000', 'null', and numbers not matching 10 valid Sri Lankan digits.	`/api/clients/route.ts` `Frontend Modals`	Eliminates dummy placeholder phones and ensures SMS dispatch reliability.
HIGH (P1)	**Ban Manual '-DUP' / '-COPY' Suffixes:** Block tellers from appending duplicate markers to force colliding bill numbers.	`/api/pawns/route.ts`	Prevents unauthorized duplicate capital disbursements on duplicate tickets.
MEDIUM (P2)	**Forced Branch Scoping on Paper Bills:** Enforce KIR- and KDW- prefixes on all paper book pawns at creation time.	`/api/pawns/route.ts`	Prevents cross-branch bill collisions when physical books share serial ranges.
MAINTENANCE	**Database Cleanup Script:** Merge Manisha's duplicate client, void A 6976-DUP1, and clean literal 'null' strings.	`One-time SQL Migration`	Purges historical data anomalies without disrupting current operations.
